

Postpartum Support Resource List

MilkWorks understands that pregnancy and childbirth can result in depression and/or anxiety, which may make it harder for you to breastfeed and mother your baby. We routinely screen mothers using the Edinburgh Postnatal Depression Scale (EPDS). If you score high, we strongly encourage you to seek support and treatment.

We suggest that you see your Primary Health Care Provider, Obstetrician, or Nurse-Midwife to rule out any possible medical causes for depression, including a low thyroid level, or low levels of vitamin D or B. While there are a number of therapists, counselors, and support groups, the following community resources have been recommended to us:

Physicians • Counselors • Therapist
